SWAPNIL SUTAR

L3 Support Engineer | Production Operations | Incident & Problem Management

Pune, Maharashtra, India • +91 9765907179 • swapnilsutarr281@gmail.com

PROFESSIONAL SUMMARY

L3 Support and Production Operations professional with 5.5 years of experience supporting business-critical enterprise applications at Dell Technologies and NVIDIA. Experienced in high-severity incident handling, log analysis, root cause analysis (RCA), application and infrastructure troubleshooting, and service restoration. Uses Splunk, Dynatrace and Grafana across Linux/Unix servers, networking, Oracle SQL databases, Kubernetes workloads and data pipelines. Follows ITIL processes through ServiceNow ITSM, with a focus on SLA adherence, reducing MTTR, validating recovery and preventing recurring incidents.

CORE SKILLS

Monitoring & Observability	Splunk, Dynatrace, Grafana, Log Analysis, Alert Investigation, Root Cause Analysis
Platforms & Automation	Kubernetes, Terraform, Bash Scripting, AI Agent Troubleshooting, Data Pipelines
Cloud & Operating Systems	AWS EC2, Cloudwatch, Microsoft Azure, Linux, Unix, CPU/Memory/File-System Troubleshooting
Database & APIs	Oracle SQL Database, REST APIs
Networking & Messaging	TCP/IP, DNS, Network Troubleshooting, Kafka, ActiveMQ
ITSM & Operations	ServiceNow ITSM, ITIL, Incident Management, Problem Management, Change/Release Support, SLA Management
Batch Processing	Control-M, Autosys, Batch Job Monitoring and Rerun Validation

PROFESSIONAL EXPERIENCE

Senior Analyst - L3 Support | **Dell Technologies (via eClerx Services Ltd.)** — **Jul 2025 – Present | Pune**

- Lead L3 escalations for 100+ applications across APJ, EMEA and AMER, coordinating triage, troubleshooting, service recovery and permanent-fix follow-up.
- Correlate Splunk, Dynatrace and Grafana logs, metrics and events to identify failing components and validate recovery.
- Troubleshoot AI agent workflows and data pipelines by isolating data, dependency and runtime failures.
- Investigate post-release Kubernetes workload health and apply Terraform changes for consistent environments.
- Diagnose Linux/Unix server issues and TCP/IP or DNS faults using ping and traceroute.
- Automate health checks and log collection with Bash; manage incidents, changes and releases in ServiceNow ITSM under ITIL practices, contributing to a 20% MTTR reduction.

L3 Support Engineer - Production Operations | **NVIDIA (via Spectrum Consultant India)** — **Apr 2021 – Jul 2025 | Pune**

- Handled high-severity production incidents for business-critical applications in a 24/7 support environment.
- Correlated Splunk, Dynatrace and Grafana logs, metrics and alerts to investigate symptoms, identify root causes and support service restoration.
- Monitored data pipelines and Control-M and Autosys batch jobs, checking status and validating successful reruns.
- Troubleshot Linux/Unix CPU, memory and file-system issues, DNS/TCP/IP faults, and failures involving REST APIs, Kafka and ActiveMQ.
- Supported Kubernetes environments and applied Terraform changes to cloud infrastructure.
- Queried Oracle SQL databases to investigate data discrepancies and validate fixes with the database team.
- Prepared RCAs for recurring incidents and maintained incident/problem records in ServiceNow.
- Resolved 1,500+ incidents and requests annually while maintaining SLA adherence above 95%.

CERTIFICATIONS

Gen AI Certified — Provided by eClerx Services under TUM University (Technical University of Munich)

SELECTED ACHIEVEMENTS

- Supported 99.9% availability across 100+ production applications.
- Improved incident triage speed by 30% through monitoring and automation.
- Improved batch job success by 20% and reduced repeat incidents by 15% by identifying recurring failure patterns.

EDUCATION

Bachelor of Engineering | Sinhgad Institute, Solapur — **Jun 2016 – Oct 2019**
